* Percentiles for HCAHPS "Top-box" and "Bottom-box" scores include 4,438 hospitals that received HCAHPS scores in April 2019. Because not all hospitals report their results on Hospital Compare, the number of hospitals may differ from those shown here. Surveys are from patients discharged between July 2017 and June 2018.
Scores have been adjusted for survey mode and patient-mix.
${ }^{1}$ The "Top-box" is the most positive response to HCAHPS survey items. Percentiles indicate how often patients gave positive assessments of their hospital experience. With "Top-box" scores, the higher, the better. For example, on "Communication with Nurses," $5 \%$ of hospitals scored 90 or higher ( 95 th percentile) in the "Top-box," while $5 \%$ scored 71 or lower (5th percentile). The median (50th percentile) score on this measure was 80.
${ }^{2}$ The "Bottom-box" summarizes the least positive responses to HCAHPS survey items. Percentiles indicate how often patients gave negative assessments of their hospital experience. With "Bottom-box" scores, the lower, the better. For example, on "Communication with Nurses," $5 \%$ of hospitals scored 1 or lower (5th percentile) in the "Bottom-box," while $5 \%$ scored 9 or higher (95th percentile). The median (50th percentile) score on this measure was 4.

Beginning with July 2018 public reporting (October 2016 through September 2017 discharges) CMS no longer reports the Pain Management composite measure.
